

Why to clear acne?

Skin cleansing is basic to maintaining its health and contributing to its aesthetic appearance. So the dirt that sticks to the thin, oily layer on the skin's surface has to be removed.

In adolescence, oily skin can easily become acne-prone with blackheads and spots. The biological cause of this change is an increase in the quantity of sebum (hyperseborrhea), combined with a change in sebum quality (dysmenorrhoea).

Features Comparison

- Sulfate and Soap free
- Non greasy
- Mildly acid pH
- Non comedogenic
- keratolytic
- Sebum regulating

- Professional daily cleansing of mixed, oily and acne-prone skin
- Help to teenage acne prevention and treatment
- Gentle cleanser for acne-prone sensitive skin

Acne-prone skin /Cleansing

Without any doubt, cleansing is the most basic yet highly important step in acne treatment. Picking up the wrong cleanser while dealing with acne can lead to more breakouts. Dermatologists explain that an effective cleanser for acne-prone skin helps to balance out excess sebum production without disturbing the natural skin oil levels without blocking out pores. As per clinical trials, Zinc PCA-based cleanser helps to reduce excess oil, clean clogged pores, and soothes irritated skin.

dr sam's solution professional grade skin cleanser , a range tailored to oily and acne-prone skin
